2016 Hacking With Gloves Image Inclusion Standard

1. Overview

This standard establishes the criteria for images to be included in this repository. In keeping with the ridiculousness of this repository, this standard has been formatted in classic IEEE standards style.

For more information, please consult the readme for this repository or one of the main contributors and curators of this repository.

2. Criteria

An image considered to be included in this repository must adhere to the following criteria:

- Image format must be JPEG, GIF, or PNG
- Image must include one, or many, individuals participating in a perceived 'hacking' action. This 'perception' must be obvious to the general viewer.
- Image must fall under a general concept of 'ridiculous', or naive, or stereotypical depiction of a 'hacker'. For example, an individual, holding a laptop in a dark room, wearing sunglasses and a hoodie.
- Each image must be added to the sources file. Each source must appear on a new line in this file.
- If the image is less than 500KB, the image may be added to the repository. Addition to the source file is still required.
